

# San Antonio International Airport Construction Update

---

## Parking Construction To Bring 3,000 Additional Spaces

**PROJECT SUMMARY:** This project will bring patrons a new five-story, 3,000-space parking garage facility. The new structure will be about three football-fields in length and will cover more than a million square-feet worth of space. Located in front of Terminal Two, the structure will visually match the existing Long-Term parking facility thanks to the use of precast concrete and iron grating. But the new facility will showcase some new features as

well. For example, an enclosed air-conditioned walkway will provide passengers with comfortable protection on the trip from their vehicle to Terminals B and C. Once the new garage facility is completed, San Antonio International Airport will offer its patrons a total of more than 9,000 short and long-term parking spaces.

### IMPACT AND TIPS:

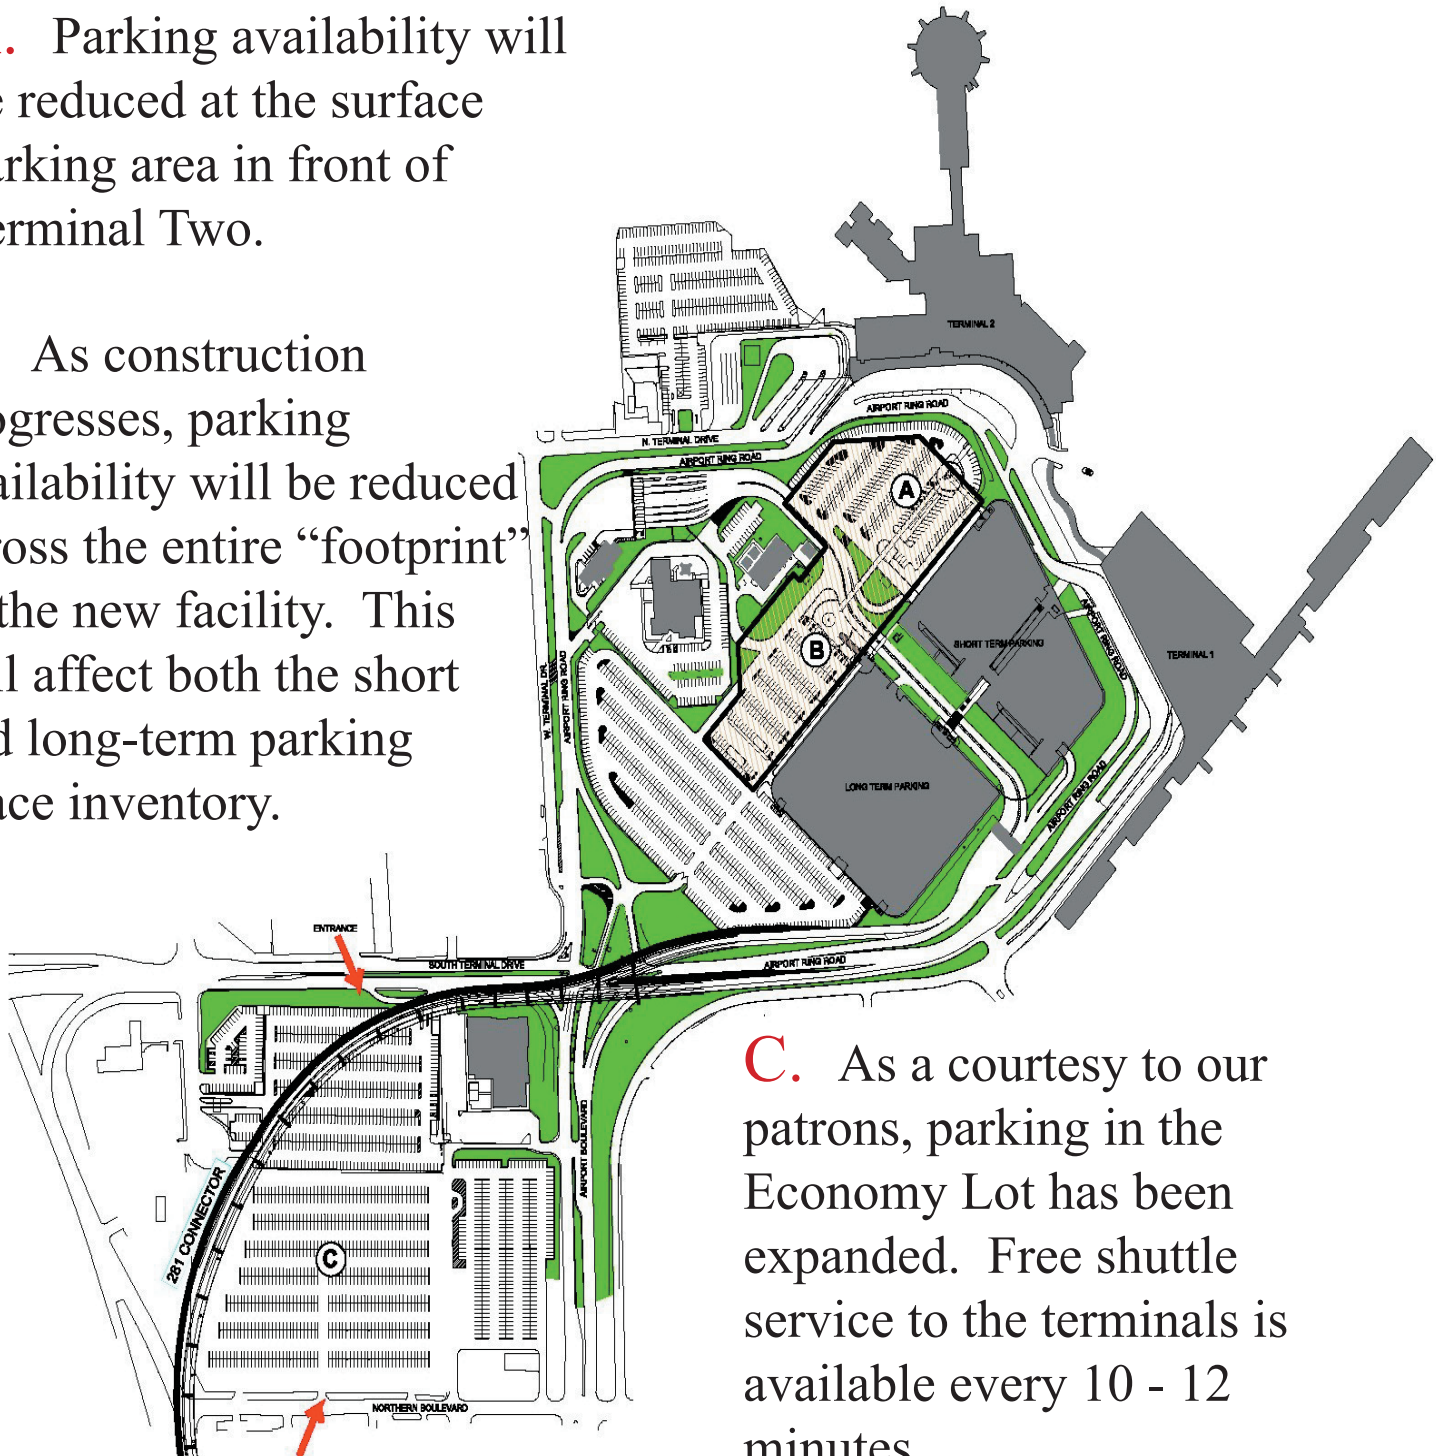

- \* Construction should begin in Fall of 06'.
- \* Scheduled for completion in Fall of 08'.
- \* During construction, parking availability will be affected at the surface parking area in front of Terminal Two.
- \* Sections of both the Short & Long-Term surface parking areas will be removed from the parking space inventory in order to construct the new facility.
- \* As a courtesy to our patrons, parking in Economy Lot has been expanded. Free shuttle service to terminals provided every 10-12 minutes.

# San Antonio International Airport Construction Update

**A.** Parking availability will be reduced at the surface parking area in front of Terminal Two.

**B.** As construction progresses, parking availability will be reduced across the entire “footprint” of the new facility. This will affect both the short and long-term parking space inventory.

**C.** As a courtesy to our patrons, parking in the Economy Lot has been expanded. Free shuttle service to the terminals is available every 10 - 12 minutes.
